According to Gartner, a research and advisory company, the total worldwide CAD market was \$5.5 billion in 2010, and is projected to reach \$16.2 billion by 2014, a 5.1% compound annual growth rate (CAGR) from 2010 to 2014. It is estimated that the total CAD market will reach \$27 billion by 2019. Since the introduction of AutoCAD, a number of other commercial CAD software applications have been introduced by other software companies, including: • SolidWorks by Dassault Systemes, launched in 2001 • Navisworks by Bentley Systems, launched in 1999 • Catia by Dassault Systemes, launched in 2003 • NX by Siemens PLM Software, launched in 2000 • Pro/ENGINEER by Siemens PLM Software, launched in 2006 • Inventor by Autodesk, launched in 1997 (but first available on DVD) • FreeCAD, formerly called OpenSCAD, by FreeCAD Development Team, launched in 2011 • EASE by National Instruments, launched in 2014. Today AutoCAD, SolidWorks, and Navisworks are still the main players in the CAD market. History of AutoCAD AutoCAD's development history dates back to 1977, when the original AutoLISP programming language was created by a group of researchers at the University of Utah under the leadership of Ralph Grisham. This language became the first graphical programming language. The next year, AutoLISP was integrated into a microcomputer, the N-series, which was the first workstation to be shipped with AutoLISP software. AutoLISP was later ported to other microcomputers and it was introduced to the programming community in 1981 at the first ACM Conference on Programming Language Design and Implementation (PLDI), which was sponsored by MIT Lincoln Lab. AutoLISP was then ported to the Vax minicomputer and to the IBM PC in 1982. The PC version was ported by a programmer in the United Kingdom named Mike Gray. The original user interface for AutoLISP was developed by Gray, who later developed the first widely used, graphical programming language for Microsoft BASIC: Turbo Pascal. After the release of the Turbo Pascal language, Gray took the basic user interface and graphical programming language (graphic toolbox) and developed the first free software graphical tool
