In Japan, the insulin pump therapy is available for patients with type 2 diabetes who are not treated with insulin and are able to achieve a target blood glucose level within a patient-specific range by using a continuous subcutaneous insulin infusion (CSII) device. The National Diabetes Strategy 2014 has recommended that insulin pumps be the primary therapy for patients with type 2 diabetes in Japan.

This treatment strategy is based on the concept of the so-called "my diabetic clock" in which HbA1c levels are controlled in a way that patients with good glycemic control do not go off of their pump therapy (measured HbA1c 10%) for long periods of time, and a1d647c40b
