What is AutoCAD? AutoCAD is a complete solution for the design of any kind of object. AutoCAD comes as a full version that can be installed and run on a computer (desktop and server), or as a perpetual version that can be used for remote use (web and mobile apps). The user interface looks simple, but a lot of work is hidden in the design process. The software consists of many layers of features that can be selected or changed according to the project. The software works on the principle of layers, which are ways of organizing the drawing and are named to represent the distance between the objects on the drawing surface. The layers are separated according to the type of features, such as curves, text, dimensions, dimensions and angles, and construction features, such as intersections and lines. Using the most appropriate layer for each feature helps you to quickly build a complex drawing. The elements are organized according to their type, like lines, squares, circles, text, etc. The user can set up the appearance of the toolbars and the menus. The standard windows are generally centered and are very similar to the windows of Windows. The standard windows are very similar to those of Windows, so you will be familiar with them in a few minutes. All the standard windows of AutoCAD, as well as the model windows, can be rearranged and moved from one place to another using the Menu Editor. Each window of AutoCAD has a unique combination of menus, toolbars, and buttons. The standard menus are similar to those of Windows and consist of a series of shortcuts, which can be customized. The keyboard shortcuts are different from those of Windows. Each menu and toolbar has its unique combination of icons. The standard menus can be moved from one place to another using the Menu Editor. Possible Duplicate: Retrieve current URL in JavaScript Is it possible to access the url of the browser from javascript without using navigator.getLocation? If so, how? A: Try this: var url = window.location.href; As it says in the window.location documentation, it returns the current url. A: The window.location property contains the URL. However, it will not contain the browser's URL (e.g. unless you have told the browser to always load that URL from the address bar. Now Commenting On: Smoak hitting stride with bat, but glove is question 3/14/14: After striking out in his first at-bat, Adam Eaton hits a three-run homer in the fourth, his first of the spring By Jordan Bastian / MLB.com | DETROIT -- Adam Eaton is having an interesting spring, which is to say that he's still figuring things out. The 29-year-old outfielder has begun to turn some heads with his bat as he's produced some big hits and flashed some good at-bats in Grapefruit League games. While Eaton has plenty of things to work on, he's taking things a game at a time in his second full Major League season. The Spring Training complex has given him a good, high-quality facility to work with. The biggest thing with Eaton, as it's always been, is his defense. "His arm is just terrible," manager Dusty Baker said. "I don't think that's ever going to improve. We have to get him some better defensive partners than the last guy.... They put him with Slowey. He really didn't look comfortable. "He couldn't catch the ball. He couldn't throw the ball. He had nothing to throw to. He could have been in the outfield
