DOWNLOAD: 26, 2022 Duncan's Multiple Range Test (DMRT) is one of the multiple comparison procedures that are used in statistical analysis. by SG Carmer Cited by 221 Additional index words: Duncan's multiple range test, Least significant difference, Statistical analysis. Waller-Duncan k-ratio t test. Duncan's multiple range test has type I error rates for all of the possible comparisons between means. Duncan's test is not only powerful in detecting differences, but also provides a test of significance (p-value) for each comparison, even for the comparisons that were not detected. Duncan's Multiple Range Test is also used in Nested ANOVA and 2-way ANOVA statistical models. The test is one of the 3 similar multiple comparison tests that are used to determine if the mean of one group is different than each of the means of other groups. The test includes the Tukey-Kramer method in addition to Duncan's test. The test calculates the number of significant differences using the Hochberg method. When analyzing with Nested ANOVA and 2-way ANOVA, it is common to combine the F-test and Duncan's Multiple Range Test. They are similar tests, so the test provides one summary (F-value) and a p-value for all comparisons, so the analyst can compare the results with other variables that were not a part of the Nested ANOVA or 2-way ANOVA. One drawback to the Duncan's Multiple Range Test is that its results are only applicable to homogeneous data, which are shown in a single-factor ANOVA table. Duncan's multiple range test software free download DOWNLOAD: 25, 2022 The multiple range tests are used in all of the statistical analysis programs that we use. In the case of PAST, we simply use the Dun. or Tukey's multiple range test. Depending on what we are analyzing, the method that we are using to analyze the data will change. For example, we use the analysis methods that are provided in SPSS, SAS, and SYSTAT. Duncan's test is particularly useful if you want to focus on the mean values for the factor that you are working on. For example, we might want to focus only on the data that we
