The English language has been slowly eroding as the world's foremost language from the past decade. The United States, where the language is widely spoken, is now losing power to other countries which are quickly

becoming language centers. To preserve a language and to defend its unique culture, language, and history, the International Organization for Standardization (ISO) is accepting new languages to ensure that the world's lingua franca becomes truly international. And, of course, "international" means the United States and all the non-English-speaking countries. Gujarati is a South Asian language of the Indo-European language family. It is primarily spoken in the Indian state of Gujarat. Gujarati is spoken by approximately 60 million native speakers in India and by approximately 10 million native speakers in the United States. It is also spoken by another 2 million residents of India who immigrated to the United States and are assimilated into the American culture. The language has an official written form called Gujarati Standard Deva, which contains two variations: the Devanagari script and the Latin script. It is also spoken in the Indian state of Maharashtra. In 1835, the British Indian province of British Guiana sent a petition to the United States Congress, which requested for a constitution

for that colony. In response, congress appointed William Miller - a former slave of mixed Native American and British ancestry, who held his first position as "Indian Inspector", to draft the text for the state of Maroon (from which the word "maroon" is derived), the political body of indigenous Guyanese people in the Caribbean. That constitution was then adopted by the United States Congress and it is known today as the "Survey Bill", and is the first legislative act passed in the Territory of Guiana. In the late 19th century, many Parsis left India for the United States in search of a better life. In 1884, the Parsees of Bombay founded The Zoroastrian Society of North America. The organization sponsored educational and cultural activities as well as publications in Parsi language. The resurgence of the Parsi culture began in the early twentieth century when the Parsi community in Bombay witnessed the publication of a book titled "Ghotulam, A Historical and Descriptive Account of the Zoroastrian Religion and its Practices" by Fr. Thomas Griffiths. In the book, the author described the history of

Zoroastrianism from its ancient roots to its modern-day revival, and further

LMG2Shrut is a lightweight Windows application designed to fulfill a single goal: to help you convert Gujarati non-Unicode text to Gujarati Unicode text using the Shruti font. Simplistic looks You are welcomed by a clean layout that allows you to carry out most operations with just a few clicks. Everything is kept as simple and clear as possible so even rookies can master the entire process with minimal effort. The main window is divided into two panels, so you can easily input the text in the left one and view the converted results in the right panel. Basic functionality LMG2Shrut gives you the possibility to type in the non-Unicode text directly into the primary panel or paste it from other third-party utilities. There is no button embedded into the primary panel for helping you trigger the conversion process, so you need to go to the File menu

and select the conversion option or press the preset hotkey. The program gives you the possibility to save the converted text to plain text file format or copy it to the clipboard so you can paste it in other documents. During our testing we have noticed that LMG2Shrut carries out the conversion operation extremely quickly and without errors. It leaves a minimal footprint on system resources, so the overall performance of the computer is not hampered. Bottom line All in all, LMG2Shrut offers a simple yet efficient software solution for helping you convert Gujarati non-Unicode text to Gujarati Unicode text using the Shruti font, and is suitable for all types of users, regardless of their experience level. Download LMG2Shrut.Q: How to check the scale property of an image in Python I want to take a screenshot of a window using Python's scipy.misc.imread and compare it to the desktop's original image to see if it is rotated or not. My initial thought was to get the scale

parameter of both images, and then compare them (if the scale is 1, it's perfect and no rotation). However, when comparing, the second image's scale seems to be greater than the original image. Here is an example: originalImage = scipy.misc.imread(r'C:\Users\Gaurav 77a5ca646e

Welcome to LMG2Shrut. LMG2Shrut is a free tool that can be used to easily convert Gujarati text from plain text to UTF-16 and Unicode text using the Shruti font. In this article we will take a look at the application and see if it will suit your needs. Getting Started The interface of LMG2Shrut has been designed to make it as easy to use as possible. You can do most of the work using just the primary panel and you can easily add a separate panel to carry out specific operations such as editing text before conversion or copy-pasting the converted text. Basic operations The LMG2Shrut interface is organized into two panels, with a wide variety of options in the primary panel

and just a few more in the secondary panel. Below is a list of the main options in the primary panel: Type the text to convert from the primary panel: The text you type in the primary panel will be used to convert Gujarati text. Selection mode Select the text that you want to convert by using the mouse. Enter the file name: After selecting the file name, you will be asked to choose between one of the conversion options. Convert Gujarati text: After selecting one of the conversion options you will be presented with a preview of the converted text. You can now enter more text and modify the content. Edit the text before conversion: You can highlight some text in the primary panel and then press Edit. The highlighted text will be copied to the clipboard so you can paste it anywhere. Edit the text before conversion: Select the second panel (right panel) to view the converted text: You can edit the text that was converted using the second panel. Save the converted text to file: After selecting the Save to file option you can add the file name to the dialog that will be displayed. Save the converted text to file: Select Save to

file after selecting the file name option. Copy the converted text to the clipboard: If you copy the converted text from the primary panel to the clipboard you can paste it anywhere you want. Copy the converted text to the clipboard: This is a quick and easy way to copy the converted text to the clipboard, if you want to save it. Use the hotkey To trigger the conversion process, simply press the hotkey that is predefined for your regional settings. Use the hotkey: Use the hotkey to trigger the conversion process. Keep in mind: LMG2Shrut does not have any Internet connection requirement and it is extremely lightweight, so it won't slow down your computer. Supported languages For conversions LMG2Shrut supports the following Unicode scripts: Arabic, Bengali, Devanagari, Gujarati, Gurmukhi
