Mac Software The Mac platform does not have a built-in Photoshop type of program, but Adobe offers Photoshop Touch. Along with being a portable version of the program, the software is compatible with all of the same file formats that Photoshop is. It's easy to download and install Photoshop touch. You can find it at , as shown in Figure 11-2.

Q: Why do I need to draw something with a polyline tool for a plt.plot to display on the canvas? I have this very simple python code that runs in IDLE to plot a simple polyline (not a polygon):
`import matplotlib.pyplot as plt
x = [1, 2, 3, 4, 5, 6, 7]
y = [3, 4, 5, 6, 7, 8, 9]
plt.plot(x, y)`
It plots the line on the canvas (the graph) fine. However, if I uncomment the line: `plt.draw()` then the line doesn't appear on the canvas. Is this the expected behavior or am I using matplotlib wrong?
A: You need to add a canvas, and then plot on the canvas.
`import matplotlib.pyplot as plt
from matplotlib.backends.backend_agg import FigureCanvasAgg as FigureCanvas
x = [1, 2, 3, 4, 5, 6, 7]
y = [3, 4, 5, 6, 7, 8, 9]
fig = plt.figure()
ax = fig.add_axes([0.15, 0.15, 0.9, 0.9], dpi=100)
ax.set_xlim(0, x[-1])
ax.set_ylim(0, y[-1])
ax.scatter(x, y)
canvas = FigureCanvas(fig)
ax.draw_idle() # the plot actually occurs in the UI thread, so call it here
canvas.print_png('plot-canvas')`
You can load the plot into a memory image.
`import matplotlib.pyplot as plt
from matplotlib.backends.backend_agg import FigureCanvasAgg as FigureCanvas
import numpy as np
x = np.array([1, 2, 3, 4, 5, 6, 7])
y = np.array([3, 4, 5, 6, 7, 8, 9])
fig = plt.figure()
ax = fig.add_axes([0.15, 0.15, 0.9, 0.9])`

Q: TikZ: how to stretch bottom node to all other nodes I have the following diagram, which I want to be at least as wide as the longest path. Currently it is being centered by the label distance. I also want the bottom node to stretch to the edge of the page and the labels to line up horizontally. How can I accomplish this?

```
\documentclass[border=10pt]{standalone} \usepackage{tikz} \begin{document}
\begin{tikzpicture}[ every node/.style={font=\sffamily\fontsize{7}{7}\selectfont},
every path/.style={densely dashed,thick}, % Positioning label distance=.5cm, ]
ode [style={draw=red, fill=red!20}, rounded corners] (1) at (0,0) {A}
child { node [style={draw=green, fill=green!20}] (2) at (1,0) {B}
edge from parent node {$\theta_A$}
child {node [style={draw=yellow, fill=yellow!20}] (3) at (2,0) {C}
edge from parent node {$\theta_B$} } }
child {node [style={draw=blue, fill=blue!20}] (4) at (3,0) {D}
edge from parent node {$\theta_B$} };
ode [style={draw=red, fill=red!20}] (5) at (5,0) {E}
child { node [style={draw=green
```
