Microsoft Word has been a desktop office software used as a simple & flexible text editing tool for more than 25 years. With Microsoft Word the user could easily and quickly create and edit any kind of text, including complex tables, charts, graphics, etc. Besides the common text editing features, Microsoft Word could also do several other things well, such as reading, viewing and creating files from different document formats. But as a word processor, the effects of overwriting data over the partition are more severe than with other types of documents. The files recovered from the damaged Word document are usually corrupt or empty. Some notepad-like software may be effective in saving the damaged files, but it will not restore the original order and structure of the contents. If we have to tackle the recovery problem, we must make sure to choose a good data recovery software which has the function to extract the contents from a corrupted Word document.
