Browse all Steam games for Windows. Steam is a digital distribution platform developed by Valve Corporation..Natural and synthetic resins as molding materials have been widely used for light-weight, low-cost molding. There is a tendency toward widespread use of more economic molding materials with increase in size of automobiles and products with moderate quality levels. As these molding materials are used for other parts than the automobile-use parts, there is an increasing demand for reduction in weight. Crystalline resins, such as polypropylene and polyethylene, are widely used for automobiles and products with high quality levels. It is known, however, that they are inferior in heat resistance and impact strength because they are highly crystalline resins. Thermoplastic elastomers, such as block copolymers consisting of vinyl chloride and vinyl acetate monomers, styrene-butadiene-styrene block copolymers, and styrene-ethylene-butylene-styrene block copolymers, are used in many cases as modifiers for modifying crystalline resins. Crystalline polymers, however, have drawbacks as base resins for molding materials. They have insufficient dimensional stability and heat resistance. Thermoplastic elastomers, on the other hand, are used as modifiers for improving the heat resistance of crystalline polymers. They do not sufficiently serve as a modifier for improving dimensional stability, impact resistance and heat resistance. It would be an advantage for resins to have an improved dimensional stability, an improved impact strength and a further improved heat resistance. There is disclosed a thermoplastic elastomer composition comprising (a) 100 parts by weight of a copolymer consisting essentially of 50 to 90% by weight of a non-crystalline vinyl aromatic hydrocarbon unit and 50 to 10% by weight of a crystalline vinyl aromatic hydrocarbon unit and (b) 20 to 500 parts by weight of a thermoplastic resin (see Japanese Patent Application Laid-Open No. 85694/1988). The above-disclosed copolymer is excellent in dimensional stability and weather resistance, but the impact strength is low. In the past, a styrene-butadiene-styrene (SBS) block copolymer has been considered as a good modifier for crystalline polypropylene. This is because its molecular structure has a glass transition temperature (T<sub>g</sub>) and an equilibrium modulus (coefficient of dynamic swelling) which are both
