Customization AutoCAD supports customization through a number of means, including customizing drawings, placing objects, and using programming languages such as Visual LISP, Visual Basic for Applications (VBA), and AutoCAD APIs. The ease with which a custom or semi-customized drawing can be produced is highly valued by many users, and this customization is often cited as one of AutoCAD's distinguishing features. An example of a commonly used customization is the replacing of a stock or standard feature, such as a particular lettering style, font, or color, with a custom one. AutoCAD allows saving custom templates, (either named or numbered) which can be used to customize the same drawings with different attributes (color, style, etc.) from that point on. AutoCAD 2012 added the ability to save three different custom templates, allowing three different customizations to be made. AutoCAD 2013 allows saving three custom templates; one for each custom style. AutoCAD 2016 allows saving up to 99 custom templates in any drawing (not only in the Customize tab). User interface AutoCAD is designed for use on desktops and laptops. The program can be used from a mouse-only interface or with a keyboard and a mouse. It can also be used with a stylus and a pen tablet, though it is more difficult to set up the stylus because of the lack of software support for the pen. For users that need a more full-featured design environment and advanced 3D editing, Autodesk offers AutoCAD LT and AutoCAD WS which are delivered in a client–server architecture that uses the IPP protocol for viewing and exchanging design data. AutoCAD LT is a more basic (as opposed to 3D) modeler and is primarily used by small companies and by graphic designers that do not need 3D editing. AutoCAD LT is often used in conjunction with Autodesk's DesignCenter software and 3D Warehouse which are designed for sharing ideas and information. AutoCAD WS is a full-featured professional version of AutoCAD and allows users to create architectural models, design engineering models, and electrical design models. It is designed for use by large companies and/or those that require complex 3D-modeling. This software can be used with AutoCAD LT in a client–server architecture that uses the IPP protocol for viewing and exchanging design data. Autodesk still supports this a1d647c40b
