What you need to know: There are 2 ways to import feedback into a drawing. You can import it using the Markup Import feature that lets you import on-screen text, comments, annotations, or images. Or you can import the material using the Markup Assist feature, which lets you import paper- or PDF-based drawings or materials with comments and annotations. You can learn how to import markups into a drawing with Markup Import or Markup Assist in this video: [You can learn how to view and interact with markups in a drawing with the Markup Review tool.](#) With the Markup Review tool, you can control whether to see and interact with markups, turn them off, or create your own custom views. You can search for existing material (either importable or non-importable) in your drawing with the Markup search tool. This feature lets you search for content using a combination of annotation keywords and content properties to find markups and imported material in a drawing. You can set up a drawing with a Content Filter that makes it easier to find imported or non-importable material. With the Content Filter, you can create a class for importing or non-importable material. You can then set the class as the default behavior when you add new material to a drawing. After you import the material, you can use the Markup Revoke tool to remove existing imported material from the drawing. You can remove imported material that was unintentionally created or imported. You can import pages or PDFs from CAD or DWG files. Updated CAD and DWG Features: Create and edit geometric layouts: There are two ways to create geometric layouts in a drawing. You can use the Drafting tool or you can use the Design tool. The Design tool lets you create geometric shapes such as boxes, lines, circles, and arcs. You can rotate, scale, move, and offset geometric elements with the Design tool. You can also create and edit component types, dimensions, and reference planes. The Design tool can also be used to create views and templates. The Drafting tool lets you create geometric shapes and text directly in the drawing area. You can create polylines, ellipses, circles, and arcs, and you can edit them, rotate, scale, or move them. The
