manufacturing tasks. This article will help AutoCAD users get acquainted with the software's features and capabilities. Working With the Interface AutoCAD 2017 has a clean, elegant, and intuitive interface that's well suited for novice users and very familiar to experienced users of earlier versions. To get to the main menu, first open a drawing. In a new file, the name of a file that's open in the main application window will appear at the top of the left edge of the window. If you select a non-visible file, the name of that file will appear in the right pane. To open a file, you'll click the folder icon on the left side of the application window. From the main menu, you can open a drawing, open an existing drawing, save a drawing, save the current drawing, or create a new drawing. You can also view a list of all open drawings, and view or create a drawing template. You can create a new drawing from an existing

drawing by opening it or by selecting a drawing template, in which case the options you choose will apply to the new drawing. To save a drawing, you'll open the File menu and choose Save. The window will look like the one on the left side of the image. The file name and location can be changed before saving. Most functionality of the interface is located on the top toolbar, or on the Ribbon. The main toolbar includes buttons that control settings and properties, and a menu bar along the top that includes common commands. The menu bar is an array of buttons with icons and text labels. In 2017, the top menu has been redesigned to add more features, improve the organization of its content, and make it more accessible and intuitive. With the top menu expanded, you can add or remove the top, bottom, left, and right panels. The top menu contains all the commands and options in

the 2017 release. The Ribbon, as in previous versions, groups the most common commands together and provides

The castle was reconstructed in its current form after an accident caused by a flash flood in 1437, and in 1992 it was classified as a national monument. A narrow and slippery stream (a tributary of the river Danube) flows through the castle; the natural feature

was used for the construction of the medieval settlement. There are three entrances to this cave – the largest of which is located in the north-eastern part of the hill, below the Harsány Castle. The smaller openings are located in the same level of the hill, with the inner opening at a height of 45 metres. In total there are seven entrances to the cave, and because of the weathering and the collapse of the limestone, you can see an almost identical number of traces. The cave has two archaeological layers: a lower one, dating to the Stone Age, and an upper one, dating to the Iron Age. The former is the remains of a fortified settlement, while the latter is made of the walls of the castle. The cave can be explored on one of the tours organized in the castle, or it can be visited by itself,
