Full Screen Player is a very small application that you can use to play video files in full-screen mode. The user interface of the tool is simple to navigate through. You can add videos by using the file browser or the "drag and drop" method. So, you can view file properties (e.g. full path, resolution, filters) and play a CD or DVD. But you can also pause, resume and stop the video, play from the beginning, navigate back and forth within a video, as well as go to the next or previous track. Furthermore, you can create, save and load a playlist, add more files, remove and shuffle items, zoom in and out, set Full Screen Player to always be on top and, evidently switch to full-screen mode. In the "Preferences" menu, you can set Full Screen Player to automatically switch to full-screen mode at startup, repeat, increase priority, rewind on keyframes and check up the playlist. Moreover, you can select the preferred soundtrack and interface language, start playing the movie from the moment when it was earlier

interrupted, change aspect ratio, choose sound device, set file associations, and more. The program uses a moderate amount of system resources, includes a comprehensive help file with snapshots and didn't pop up any errors during our tests. Although Full Screen Player doesn't give you access to some important tools (such as loading a movie with a subtitle), we recommend this tool to all users who want a straightforward media player.
