You're not a real racer, mister! The first thing that we're going to do, is make you a real driver: you first can test your riding skills in the virtual reality helmet. * True full-body control * Excellent stereoscopic visuals and audio, with 3D glasses * Tracks are fully customisable, from their design to their custom control options (online or local) About This Game: For years, the city of Los Angeles has been plagued by the Zephyr Mafia, a gang of ruthless, road-ruling terrorists who perform the most vicious crimes under the cover of anonymity. Until one day, a detective became a target himself, and so now he and his buddies are the only ones who can stand up to the Zephyrs and their human-hating, road-ruling Nazi fans. Now, the streets of Los Angeles have never been so dangerous -- and so fun -- as they are today! About This Game: The Martian Military controls the base at Ares, orbiting Mars. They have a secret facility deep under the Martian surface that is launching a brand new weapons system: the Sandcat. In the past, the Martian Military has used "subterfuge" to launch covert operations on our planet. You'll be asked to do the same thing in this version of Combat Mission: Black Sea, one of the most popular of the original Combat Mission series. This simulation brings one of the series' veterans on Mars as you attempt to foil the military's secret mission -- and perhaps even protect Mars from invasion. About This Game: Every year the U.S. and Russian spaceflights have a serious malfunction, the NASA launch crew and the Russian cosmonauts are lost during the launch. The most of the American cosmonauts died in an unknown reason. The Russians continued to use the latest American orbital rocket, a supersonic bomber called the X-28 that was supplied by the U.S. military. In this simulation the U.S. government is threatened that all the space debris will crash on the ground and the damage to the environment will be significant. Also, the U.S. government starts to blackmail the Russia, threatening to use the secret nuclear armed bombers that can strike anywhere. The Russia government has no other choice but to accept a more reasonable solution: agree to supply the U.S. with an advanced version of the X-28 orbital bomber. c9d1549cdd

Effect of puerarin on the uterine contractions induced by oxytocin in pregnant rats. The effect of puerarin on oxytocin (OT) induced uterine contractions in pregnant rats was investigated in this study. Puerarin, dissolved in a physiologic salt solution and diluted to 1 mg/ml with distilled water, was intravenously injected to pregnant rats at a dose of 2 mg/kg. Uterine contractions were monitored by a polygraph. Puerarin significantly increased the frequency and magnitude of uterine contractions in pregnant rats. The oxytocin-induced uterine contractions in pregnant rats were completely inhibited by puerarin (2 mg/kg). The results showed that puerarin has the inhibitory effect on OT induced uterine contractions, which suggests that puerarin has a clinical role in prevention and treatment of abnormal uterine contractions induced by OT in pregnant rats.

A Guide to Alternative Media | Targeting Women On the surface, Alternative Media is supposed to be for women. Why? Because they want to help women find alternatives to the "pack mentality" of mainstream news. They promote the solutions to the problems that women face in our culture. They want to raise women up and empower women. They promote equality, and they promote social justice, women's rights, and so on. Yet in spite of their (potentially) feminist agenda, Alternative Media has yet to fully embrace equality and the feminist movement for women's rights. Instead, Alternative Media's women-centric content generally falls into one of three categories: Some Alternative Media sources are overtly feminist, including women-only podcasts like The N. We get to skip to the end of the audio to find out if the women are listening in on the men's conversation, because there's no doubt the men are talking about men, and not women. We listen to the men in the hopes that we'll somehow discover something about

Game Apple Cheers Up VR NBA Apple users, rejoice, as a VR bowling game, developed for iOS devices, has finally

been released. It's called Playground Games' Nightcrawler VR Basketball. Nightcrawler VR Bowling takes the iPhone to the real-life court and lets you play life-sized bowling (and VR compatible) games. With six different game modes, Nightcrawler VR allows players to become one of seven different characters. They can go it alone, or as a team, and either choose to play the game solo or create a team after beating six foes. If you do choose to play solo or stick with the same teams, your scores will be reflected in a global ranking, and you can choose to share the score with your Facebook friends with a sticker. There's no word on whether the game will be offered as a free download but the game is available for \$0.99 (USD). Also, word on the street has it that Apple might be working on a VR social game. After all, what's a game without fun? (Thanks for the news tip, Skeptic) Playground Games has described the title as a "highly tactile mini-game" and the graphic generated graphics have been designed to be as close to real bowling as possible. The concept was originally developed as a small taster project for the latest iPhone 6 and then released as a free app after it's been implemented on the iPhone 6 Plus with much success. Players can choose from seven different characters: Nightcrawler, Spider-Man, Wolverine, Gambit, Deadpool, Nightcrawler and Lucy. Using a gyroscope,

players can freely spin the bowl around to get the best score. Like the new Marvel comic series, the comic book-inspired story here involves a mechanised robot called Nightcrawler attacking US cities. The storyline sounds great but this is just an app. Beta runs in just over 2 minutes but I wasn't able to test any of the gameplay mechanics. With the performance of EVO, Vive and so many other VR games being so inconsistent so far, I'm not holding my breath waiting for this to really work. Knight & Squire adds a pixel game to its canon of products. It's basically a side-scroller with a medieval setting. The story follows two siblings named Knight and Squire. One of them is selected to be the next leader of their

The white spherical pods on the walls are used to give the players, and especially the mechs, the ability to grab and jump into the air. Just like in previous versions of the game, the jump is mapped to the jump key. Starting in version 3.0, you can also hook a line to the grips to pull yourself up. All you need to do is build one on the end of the line, or
