Unlike other programs such as GIMP ([_www.gimp.org_](http://www.gimp.org)), Photoshop is much more likely to have image processing and compositing tools available to most users. Chapter 2 gives you some pointers for using Photoshop and Chapter 11 discusses advanced compositing techniques in the software. Most users start with Photoshop Elements 6 and Photoshop CS3, but Photoshop CS3 is a more advanced application. In this chapter, I provide a comparison of Elements 6 and Photoshop CS3, and I explain how to work in either program. # ADOBE PHOTOSHOP CS3 You can quickly open images in Photoshop and other programs by going to File⇒Open, or you can click the Open button on the toolbar. This button has a film strip over it that shows you all the files in your current project or photo set. In the figure on the right, you see the Open button, which is on the top right edge. To create a new document, choose File⇒New to open the New Document dialog box, shown in Figure 3-1. Then choose the type of document you want. You have these options to choose from: * **Single Image:** Open an image that you've exported from your scanner, digital camera, or other device. * **Photomerge:** Creates a composite image from several images that you've imported into your computer. * **Workspace:** Brings up the New Document dialog box from within your current Photoshop project. * **Open:** Opens a RAW image saved in a RAW file format such as those provided by Adobe. RAW images are a form of compressed, uncompressed, digital-camera raw data file that lets you capture a huge amount of image information. * **More Files...:** Displays the Open dialog box to select files you want to open. To view only RAW files, choose Files of type CS6 (lowercased _m_) from the left-hand side of the dialog box. FIGURE 3-1: You can quickly open images by going to File⇒Open, or click the Open button on the toolbar. ## Inserting and Moving Images Photos, graphic elements, and other objects (everything except empty space) appear on your screen as individual layers. If the object isn't on a layer, you can add it. You can move objects from one layer to another

Single-injection and long-term repeatability of peripheral intravascular laser assessment. A new technique, peripheral intravascular laser assessment (PILA), allows continuous, noninvasive, quantitative measurement of blood perfusion within small arteries and arterioles in the leg, finger, or ear. Based on an exactly defined protocol and instrument, 19 subjects (eight women and 11 men) were examined, using three different wavelengths (570, 700, and 780 nm) for three different test points (ankle, toe, and finger) and three different probe materials (polyurethane, polyvinyl chloride, and silicone). In all, 51 laser measurements were performed (nine subjects using the three laser wavelengths and probe materials at three test points). The three wavelengths resulted in significant differences ($P < 0.05$), but the perfusion values were significantly greater with the longer wavelengths. All findings suggest that the wavelength of 830 nm (or 880 nm) can be used as a reference wavelength in PILA. The findings also suggest that the response in absolute perfusion values to PILA is dependent on the wavelength, and, in addition, these values are dependent on test-retest, between-test-point, and probe material differences.1. Police fatally shot a man Friday who was involved in an armed robbery on Interstate 40 in Kansas City, according to the Missouri Highway Patrol. Officers from the Kansas City Police Department and Unified Command responded around 2 p.m. to the 900 block of Jayhawk Dr., where a robbery was taking place, KCKPD said. When officers arrived, the suspect and other people were inside an occupied home, and there was some type of ongoing disturbance inside the home, said Sgt. Matt Murray of Unified Command. Police said the robbery had taken place at a nearby car wash. When officers entered the home, the suspect began shooting at the officers and the officers returned fire, killing the suspect, police said. The suspect was later identified as Arthur Henson Jr. 29, of Kansas City, according to the Kansas City Police Department. Henson was wanted on an arrest warrant in Johnson County, Kansas for aggravated assault and weapons charges, police said. The officers who fired on Henson were not injured. Their names have not been released. At the scene, police recovered a .22-caliber handgun that was reported stolen from a Johnson County property. James and Miranda Bailey have a new song, and it's a big one. "The Soloist," an original written with Grammy-winning producer, writer and actor Steve Tyrell, will be released as the second single from the inspirational debut album "The Power of I Am." The project, produced by Steve Tyrell, is released Sept. 21 on Majestic Music Group. "The Soloist," is a pop ballad that resonates with the life-changing message of the album. "We felt this song would be a powerful and honest song," said James. "It speaks to the life, his life, and at the same time challenges us to reflect on our own." James, 43, and Miranda, 41, co-wrote "The Soloist" with Tyrell. "Steve Tyrell is a remarkable songwriter and storyteller," said Miranda. "I am so proud of 'The Soloist,' and am so happy James and I could share this experience with him. 'The Soloist' speaks to the spirit of the album, and I hope people will be touched by it." The Baileys will join Tyrell, his wife and producers Jason
