In today's tutorial we will be installing and using MRicro (MRicroN), which is a software application for medical imaging with a virtual image viewer, as well as an image editing and analysis tool that can be used in research studies and education. While MRicro is free of charge, there are several commercial and paid-for versions of MRicro. This tutorial will be focusing on using the version for Windows. MRicro is a lightweight application which supports a number of image formats. MRimg is a library that is integrated into the main application. The MRicro library is the main visualization tool, which is used in almost all MRicro functions. Installing MRicroN 1. Download MRicroN and unzip it The files are unzipped on the Desktop by default. 2. Launch the setup file Use a text editor to open the MRicroN\_Setup.exe file, and change the folder of installation to the point where you extracted the file. This will produce the following folder structure: 3. Start the installation. When the application is running, there is a new program window will appear showing the results of the installation. 4. Agree to the license conditions A yellow dialog box will pop up for you to accept the terms of the license agreement. Once you click the "I Agree" button you should be able to continue. 6. Running the application Open the application, and it will bring you to the main interface. You can now use the application for any work you wish. 7. Impress your coworkers Your coworkers will think you are very helpful. Note: It is recommended that you install MRicroN using portable version. Open the MRicroN folder on the computer and there should be no new file in there after your installation. 8. Adding files You can add files to the project very easily using the basic drag and drop function. Simply drag-and-drop a file to the project. A distance measuring apparatus, such as a laser distance measuring apparatus, by which a distance is measured on the basis of the time of flight of light, is used for acquiring vehicle-positioning information in a vehicle-mounted radar apparatus, a vehicle-mounted camera apparatus, and the like. As a distance measuring method used in this type of distance measuring apparatus, there has been known a time-of-flight method. In the time-of-flight

MRIcro is a lightweight Windows utility built specifically for helping you open and analyze medical images. The GUI seems a bit crowded at a first glance but this is only because the application comes packed with many configuration settings. Unfortunately, it lacks a help manual, and it may prove to be difficult to understand the function of each built-in feature. MRIcro gives users the possibility to add files by using the built-in browse function or the “drag and drop” support. It work with the the following file formats HDR, NII, CUB, HEAD, PNG, BMP, TIF, or JPEG. The application allows users to view a histogram, pick the transparency level, adjust the color scheme, create 3D regions of interest, overlap multiple regions of interest, rotate images to match the SPM template images, and convert medical images to SPM file format. Other important features worth mentioning let you create headers and insert additional information about them (e.g. notes, patient ID, scan number, errors), and adjust the level of brightness. When it comes to exporting options, you can save the generated project to an image file or print it. Plus, you can convert 3D items to a single 4D file. To sum things up, MRIcro comes in handy especially for medical experts or students who need to analyze medical images quickly and with minimum effort. On the downside, the entire process is not very intuitive and rookies may spend some trying to configure the dedicated parameters. 1. Field of the Invention The present invention relates to an information display device.
2. Description of the Related Art A device that can make effective use of a solar energy is known. Such a device is disclosed in U.S. Pat. No. 5,561,114 in which a sheet made of resin and having a solar cell mounted thereon is thermally contracted by using a thermal contraction material. By so doing, the solar energy is effectively utilized by turning on/off light when the temperature of the solar cell changes. According to the disclosure of U.S. Pat. No. 5,561,114, however, the amount of light that can be turned on/off is fixed. For example, only black and white, light and dark, or simple on/off can be changed. According to U.S. Pat. No. 5,561,114, it is assumed that the structure of the solar cell remains unchanged even when the solar cell
