Download the new version from the Autodesk Exchange. Get there fast and easy with the new Universal Access Viewer! You can download these zip files direct from MyDAC, your CCIDE or register and get these files for free. **CLICK HERE** to register for free.Q: Convert Type to another type I would like to convert a Type to another Type, but I don't know how. To better understand the difference between Type and Type, please read this post How do I get a Type object from the System.Type class? I need

a method, which would do the following: `var t = typeof(string); var s = ConvertType(t, typeof(System.Int32)); // s == t (string type)` Is there any C# (.NET) function like this available?

A: You are looking for: `Type.MakeGenericType(t, s);` This returns a type that is a subclass of both

Type and T. Q: NodeJS remote object creation
I'm currently working on a nodejs project that will need to connect to various "old" databases (PostgreSQL, Oracle, MSSQL, etc.) and create new objects there. For that, I'm using the NPM package `sequelize` and `mysql` nodejs to connect to the databases and create the objects. I'm wondering, how to best go about this process. At the moment, I have 2 options I can think of: Create a new object and run a function that is called when I need a new object from that particular database. Go directly to the database (via `Sequelize`) and create the objects via string manipulation. For the first option, I'd have something like this:

```
ObjectFactory.getObject('oldDatabase', {}, {},...); and then, in each model I create a method that will do the work getObject:
function() { var object; if (this.getDB() == 'oldDatabase
```
