The program is used for two- and three-dimensional drafting. 2D objects may be displayed on a screen or on a printed sheet, while 3D objects may be represented with models, solids, surfaces, and exploded views, and 3D drawings may include mechanical dimensions. Each drawing created in AutoCAD may have parametric constraints for each dimension. During the drafting process, dimensions may be moved and edited via a measure tool. Some CAD applications permit their users to view and manipulate drawings directly on their screens. This feature is known as an electronic whiteboard and may include navigation and animation tools. By manipulating objects in a screen-based drawing, CAD users can often create drawings more quickly and efficiently than in conventional methods. In the past, CAD systems were mostly used to define finished parts of an object for the purpose of manufacturing. Autodesk provides a number of object-modeling tools that let the designer make and modify complex shapes and add material properties and textures. Contents History AutoCAD started as a separate application and was originally called AutoCAD Translator. The first release of AutoCAD was a desktop application for the Microsoft Microcomputer. The development of AutoCAD was driven by Tim May and David Eller (software designers at Autodesk) who were seeking a more cost-effective alternative to dedicated CAD software then in use. AutoCAD Translator was renamed AutoCAD in 1984, after it had completed the development of the new AutoCAD product and it was available on an Apple II.[3][4] In the early 1980s, demand for CAD software was driven by an industry boom, as desktop computers first started to become widespread and the cost of CAD software was dropping, but the market was restricted mainly to mechanical engineers and scientists. The first released version was for the Apple II platform, and the first released platform for the DOS operating system was version 2.0 for MS-DOS. In 1987, it was ported to Windows for MS-DOS, as well as to Amiga, Atari ST, and Unix operating systems. This initial port was done by engineers at Autodesk and was called AutoCAD for Windows. In 1987, version 3.0 was released, and the first Linux release was version 3.5. In 1988, version 4.0 was released, and it was the first released product with a true 3D capability; earlier versions only simulated 3D objects. Version 5.0 was released in 1993

Field of the Invention The present invention relates generally to Internet Protocol (IP) telephony and more particularly to devices used in conjunction with the Internet for telephony. 2. Description of the Related Art An IP telephony system is a telephony system that transmits and receives data in the form of digitized and compressed voice and video over the Internet using Internet Protocol (IP). The voice and video signals are transmitted using Internet Protocol over the Internet via an IP network such as a computer-to-computer network or the Internet itself. The IP network itself is typically a wired connection such as an Ethernet network or the Internet. IP telephony systems are commonly used in call centers. Call centers are centralized dispatch points, or

hubs, used by businesses to handle all or a portion of their telecommunications needs. Call centers commonly handle telephone calls in response to external sources. For example, call centers are frequently used by consumer-oriented businesses to allow customers to place calls and interact with the businesses' operators or agents. In other instances, call centers are used by businesses to provide human support for customers or potential customers. In call centers, IP ca3bfb1094

Substance abuse and adolescent suicide: cultural, ethnographic, and biopsychosocial aspects. The advent of the patient interview and psychiatric diagnosis is associated with a growing and more explicit emphasis on the impact of culture, in particular in medicine. However, little attention has been given to the effect of culture on the processes of suicide and its understanding in a given context. This paper presents an example of the potential insights and complexities of such an approach to suicide and the treatment of the suicidal patient. It first presents a historical overview of suicide and adolescent suicide in the Middle East and reviews current studies on the subject. Next, it describes the characteristics of adolescents and the issues of culture, religion, and gender that are relevant to the understanding of adolescent suicide. The paper then suggests possible generalizations to suicide and psychiatry in this cultural context, and illustrates the relevance of these to the care of the suicidal patient. The group, which comprises Malaysian Chinese Association and Malaysian Indian Congress, is also calling for the government to implement the 13 recommendations of the Justice for Incumbents taskforce. It is also asking the government to remove the corrupt and incompetent officers, such as those who were involved in the IMDB scandal, from their positions in the police force. "We have been hearing about the poor state of the Malaysian police force over the years. "This is not something that we want to see in our country," said the MCA secretary-general, Dr Chua Soi Lek. He also said that while crime rate in the country had indeed dropped, a lot more needs to be done if the government is to improve the image of the police force. "The police force plays an important role in ensuring the safety and security of the country and for this, they need to be clean," he said. Dr Chua said the MCA had been working closely with various associations to improve the image of the police force. He added that last year the MCA had partnered with the Malay Police Union, the Federation of Malaysian Police (Polis) and the Royal Malaysian Police to organise a briefing and training programme for policemen on how to address complaints received. "It is important for us to work together to find solutions that will improve the lives of the officers. "Over the years, the police have been criticised for the manner in which they tackle cases and for their inefficiency in solving cases, especially those
