* Photoshop is used for many different purposes and has three major areas of application: creative work, information management, and presentation. Creative work uses the image editing tools to create logos, edit photographs, retouch subjects for magazine or commercial use, and do many other useful jobs. Information management and presentation work uses the document panel to view, manage, and present print, digital, and motion media. The following steps are a general outline for creating a photograph in Photoshop. You can use these steps and variations to create new images in Photoshop. Feel free to experiment. 1. If you want, zoom into your subject using the Zoom tool. Don't forget to check out Chapter 1 for tips on the Zoom tool. 2. Create a new layer using the Layer/Layer dialog box by clicking New Layer and naming the layer something like Your Image (discussed next). The current active image opens in the Layer/Layer dialog box. This process creates a new layer for you. 3. If you want to create a new file for your image, click the File menu and choose New. Alternatively, you can use the New dialog box and give the file a name. 4. If you're going to use filters, click Filter from the Layers panel menu and select the Filter Gallery menu. The Filter Gallery makes it easy to do color, tone, and image adjustment. 5. Click the Filter button and navigate to the appropriate filter you want to use. Use the small selection tools to adjust the filter. It has its own color balance slider, and you can adjust its strength as you like. Figure 5-2 shows an example of a filter applied to an image. Notice how it changed the color of the flower. 6. Repeat this process for other filters. Use the Layers panel and Filter Gallery to create your own layers and filters. 7. Click the Properties panel and select the Top menu. Choose Layers from the menu. The Layers panel allows you to see all the layers. 8. Click the New Layer button in the Layers panel toolbar and name the layer Photo_1, as shown on the right in Figure 5-3. Because it's a new layer, you need to move it to the main layer by dragging it on top of the current layer. This method is common for multiple layers used to create a new image. To view

Q: GWT: ListBoxSelectionModel : how to get selected element I have a ListBoxSelectionModel with some LBEs. How can I get the selected element of my selectionModel? I can get the index but I don't know how to get the LBE itself. Is there a way to get the reference of the LBE? Endometriosis and its impact on pregnancy outcome: A case report and a meta-analysis. Endometriosis has been a common disease affecting reproductive life in recent years. This is the first meta-analysis of the correlation between endometriosis and the incidence of miscarriage and preterm delivery. Based on the studies included in this meta-analysis, endometriosis is correlated with an increased risk of miscarriage. The reproductive outcomes of patients with endometriosis are mainly dependent on the severity of the disease. However, the prevalence of endometriosis-associated infertility is controversial. Additionally, the data on the impact of endometriosis on the pregnancy outcomes of gestational trophoblastic disease (GTD) patients were rare. We focused on the general population and population with endometriosis (endo-POP) separately and compared their data with the general population (R-POP) in the current study. We found that the risk of miscarriage was more frequent in R-POP (OR = 2.56, 95% CI = 1.90-3.42, P Q: Android: Supporting Context Menus There are many examples of using the Context Menu I have found on this site, but none of the samples actually show how the context menu would be used, for example:
