As the most promising candidate, tZF2 has been continuously improved and used for high-throughput ZNF-C2H2 gene prediction and target validations in other plants. In order to minimize the false-positive rate and to identify the true TFs, two different computational strategies have been combined, including the structure-based method and the ortholog-based method. As a result, 790 putative TFs were selected from the ZNF-C2H2 family in sweet potato. The selected TFs were categorized into 10 different families, namely, CCCH-type zinc finger, F-

box, K-box, NAM, NAC, ORF, RING, SAWADEE_HCD, SPL, and Zinc cluster. On the other hand, among the predicted TFs, 258 genes were annotated as putative TFs in the Nr, Swiss-Prot, KOG, GO, and KEGG databases 3a67dffec

Advertisements WordPress Core, The Blogging Platform of the Future The WordPress Core Team is working to improve WordPress' performance, accessibility, security, and plenty of other issues. These are issues of importance to most if not all WordPress users. Improve WordPress's general performance by removing bottlenecks. Improve WordPress's accessibility by making it easier to use. Improve WordPress's security by increasing the security of WordPress Core and securing WordPress from hackers. Make it easier to contribute and fix WordPress code. Speed up the WordPress project itself, so it's easier to develop for. And lots more. I started my theme design work looking for what I wanted to see in a theme. Some I found, others I created, but without the help of developers, I would never have created what I actually created today. This morning, I received a developer's email that my designer had forwarded to him to me. It was a compilation of thoughts on not so positive things and how to improve my theme, and these were followed by ideas of how to go about it. At the end, there were some links for me to take a look at. I think that we both had an idea in mind when we started this together. If it was
