WTC OVN (Open Video Network) is a free project by Svetlana-prisca, in which two groups of (two groups of) students from the Universities of Novi Sad and Petrovaradin can develop their own media for their project presentation. WTC OVN is a project which aims to offer a platform to highschool students and college students who want to make their own media (with Ren'Py), submit it to the competition and hopefully have their project accepted. Nem kažete "jedan" ali dva se stekaju, bit će sve dobro... This project is intended as a challenge to the Ren'Py community - how to fill it with a variety of little creations? Highschool students from Serbia together with the students from Romania have created a museum in which you can see all the cases of WTC OVN. You can view the full list of cases on the WTC OVN website or at the WTC OVN forum. Students from the University of Novi Sad made the tour videos, professors and teachers from the University of Novi Sad conducted the experiments and the students

from the University of Petrovaradin had the idea of the museum! WTC OVN - Open Video Network: The WTC OVN project is aimed to offer a platform to highschool students and college students who want to make their own media (with Ren'Py), submit it to the competition and hopefully have their project accepted. Recommended revision of the instructions: The original instructions on how to create a museum in Ren'Py were written by Svetlana-prisca (website) and translated into English by Alec Liu (website). There were some bugs in those instructions, which are now fixed, so you should download the new and improved instructions. Package Contents: The package consists of three files: - "1.rpy" (Ren'Py project) - main project file - "2.rpy" (project instructions) - instructions for creating the museum - "3.rpy" (sound effects) - sound effects of the museum INSTALLATION: 1. Copy the three files into the Ren'Py folder. 2. Install Ren'Py. 3. Run Ren'Py. 4. Install the GTA sound effects. 5. Open c9d1549cdd

● Use the newly-added music to create and share your animated stories! ● The added music is perfect for creating and sharing your love story. ● The beauty of anime! *Using the "MV" album: Song "ToQ Kaida no Tsubasa" ● Cellphone / PC *Using the "MZ" album: Song "ToQ Kaida no Tsubasa" Song "Habata to Kokoro to" Game "RPG Maker MV - Emotional Music Pack" is compatible with RPG Maker MV (the major version of "RPG Maker"!) Song "Habata to Kokoro to" is NOT compatible with SMIM! Game "RPG Maker MV - Emotional Music Pack" is also a game addon, not a music addon! The logic of this package is as follows: The music "Habata to Kokoro to" is the main music, and the others are the theme songs and backgrounds. Please keep that in mind and understand. It will not allow you to add some custom songs, but if you want to change some custom songs, you can simply follow the link in my profile. If you are interested in the game "RPG Maker MV - Emotional Music Pack" and want to purchase, please read the user guide before buying. *Detailed Contents: [Album] Opening Title: ToQ Kaida no Tsubasa (MZ Version) Main Theme: ToQ Kaida no Tsubasa Wind Theme: Habata to Kokoro to Dramatic Theme

One particular use of flexible oil field pipe is as a conductor for a well to transport oil or gas from the wellhead to a refinery or other storage or pumping facility. Because of the expense of using relatively short lengths of pipe to build such structures, lengths of flexible pipe are either attached end-to-end and manipulated by a long string of manipulation equipment, or woven into a closed barge shape and towed under its own power. However, such use and manipulation is done in the open sea where handling of a large mass of pipe is difficult and damaging of the pipe itself and other equipment is probable. More recently, continuous lengths of pipe have been wound on a boom and beached at a construction site to form a free-standing pipe pile. This method of construction has shown some limited advantages over the open sea method. However, because the pipe is wound onto the pile, its diameter and the subsequent diameter of the entire structure must be larger to accommodate the pipe, thus

requiring more material and thus more time to construct. Because of the relative difficulty in moving flexible pipe without mechanical aid, efforts have been made to develop a drive system to facilitate the easy movement of pipe of this type to reduce the time and manpower expended in moving pipe of this type. Preferably, any drive system used with flexible pipe should have the ability to apply relatively high forces, yet have limited deflection and be compact. Preferably the drive system should permit rapid unloading and loading of the pipe, yet reduce the degree of wear in the drive mechanism. Various known rotary drive devices have been used, such as a
