The plasma membrane H<sup>(+)</sup>-ATPase, a P-type ATPase, maintains electrochemical gradients of protons and solutes across the eukaryotic plasma membrane and is required for transport of molecules and energy between intracellular and extracellular compartments. Three recently identified plasma membrane H<sup>(+)</sup>-ATPases (PM H<sup>(+)</sup>-ATPase) provide a means to study the mechanism by which this transporter transduces the H<sup>(+)</sup>-gradient into an electrical signal. A Study of Otologic Disorders in a College Student Population. Objective To determine the prevalence of hearing loss, tinnitus, and otologic symptoms in a university student population. Study Design Prospective, observational study. Setting Private university. Subjects and Methods Sixty-three students who were consecutively enrolled at the university student health center completed questionnaires regarding hearing, tinnitus, and otologic symptoms. We evaluated student demographics, usage of otologic hearing protection, and history of exposure to occupational noise and tobacco use. Results We found that a significant number of students had hearing loss. There were significant differences among males and females in their highest level of education (P =.001), with a greater percentage of women graduating with a bachelor of science degree (P =.001). Students' average noise exposure was 10 h/week. Otologic symptoms were present in 56% of participants. Otologic symptoms were significantly associated with both tinnitus (odds ratio [OR], 4.32; P =.006) and hearing loss (OR, 4.87; P =.005). Otologic symptoms were also associated with noise exposure (OR, 1.94; P =.018). Student with otologic symptoms had a median of more than 6 years of college and more than 7 hours of noise exposure per week. Conclusion Otologic symptoms are common in this student

## What's New In?

Cloning: Use the Clone feature to quickly copy objects from one drawing to another. Clone objects in a single operation, share them across applications, or keep a reference of your designs. (video: 1:22 min.) PDF Rendering: Export your drawings to PDF files, which you can open and edit within AutoCAD. The PDF Engine can extract text from the drawing and even edit or add new text to the document, all while preserving the original layout. (video: 1:13 min.) Collaborate on BIM: Create 3D models and drawings, and share them together with your team. Your collaborators can give and receive feedback, view and update your work from any device, and annotate your drawings directly from their mobile app or web browser. (video: 1:29 min.) BIM for construction: 3D drawings can be used to guide and verify the construction of your buildings, roads, bridges and other infrastructure. Use 3D modeling to plan your projects and compare them to renderings and construction drawings, and compare construction drawings with your models. (video: 1:43 min.) Wireframing: Plan and design for mobile devices, web, and other future applications. Create interactive wireframes and interactive prototypes to plan and simulate your designs. (video: 1:29 min.) Refinement tools: Refine your drawings to deliver the best designs, faster. Use the Tolerance feature to refine the geometry of a drawing, or leverage the IntelliSnap feature to quickly select geometric elements and snap them back into place. (video: 1:16 min.) Exporting into AutoCAD: Export and share your drawings to AutoCAD as DXF, DWG, and PDF files. The DXF Viewer supports new DXF output for DXF-FEC, a new DXF standard which uses coordinates in addition to the traditional index. This makes it easier to sort, store, and find shapes, text, and other elements. (video: 1:28 min.) Find and replace: Find and replace text in drawings, layers, and other views. The Replace feature supports online search and replaces using Internet Explorer. The Find and Replace view uses the new Find 3D feature, which uses Quick Search to quickly find 3D objects in your models. (video: 1:23 min.)
