Note: If you cannot see the pdf you want, please send us a request and we will send you. All files downloaded from the site are registered for free for 30 days. After that 30 days you have to buy the eBook. This book is about the life sciences and human sciences. It is an introduction to the various fields including biology, zoology, botany, ethology, economics, environment science, philosophy and sociology. The Ecology of Human Societies is divided into six sections. Part One focuses on the two areas of human evolution: the split between humans and the rest of the animal kingdom and the subsequent evolution of Homo sapiens. Part Two is about the geographical environment and ecological change. The Evolution of Man in the Trees discusses the evolution of man from his primitive origins in the apes. How has nature changed our environment? The Evolution of Minds, explores how the human mind has adapted to its ever-changing environment. How do we recognise danger, respond to a prank, or cope with stress? In Part Three, the book explores the development of the human economy and the consequences of the ever-changing structure of economies. How can we avoid the economic collapse that followed the 2008 financial crisis? How should governments shape the economy to save capitalism as a global system? The final section, The Future of the Human Environment, examines how we can save the world. We consider the causes of climate change, rapid and ongoing environmental changes that are altering the fabric of our landscapes, our ocean, air
