I see in the Netscape browser the problem occurred when installing a third-party download manager plugin. The downloaded file I clicked on was a text file without any content. Shrinking the root tree didn't work. Edit: Sorry the image was not directly copied into this post, it is on my imgur account. A: The given answer doesn't work as posted. The link will work only once. Today, treatment is offered to individuals who are living with HIV, as well as those who are not, based on clinical need. Until the advent of effective antiviral therapy in 1995, most "compassionate use" treatments were offered to HIV patients who were in the earlier stages of the disease." But "pre-emptive treatment," which has been legal since the mid-1980s and includes the use of protease inhibitors to block the development of the virus, is different, he said. "As soon as

the protease inhibitors became available for patients who were not HIV-positive, 'compassionate use' of these drugs was an ethical issue. This has been the case for more than 15 years, so it is time to rethink how these drugs are used." In the study, researchers said that they have "historically been resistant to
